Mental Health Checklist for Children 6 to 10

1 out of 5 children, 3 to 17, have a mental health disorder and up to 80% are not receiving the mental health services they need. Untreated mental health problems can have a significant and long term impact on development, emotional and physical health, learning and quality of life. To help address this crisis, the Attachment Center of Kansas is providing this brief screening tool designed to identify children that are showing signs of needing more thorough mental health screening or assessment.

Please check the box that best describes your child:	0-Never	1-Sometimes	2-Often	Score
